Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: <ol style="list-style-type: none">1. Financial2. Healthcare3. IT	Healthcare
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the model_evaluation.ipynb file?	Myeloid neoplasms and acute leukemias derive from > the bone marrow and are characterized by abnormal proliferation of myeloid progenitor cells. This proliferation is due to genetic abnormalities of myeloid progenitor cells that result in uncontrolled growth. The most common genetic abnormality is a
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the model_finetuning.ipynb file?	Myeloid neoplasms and acute leukemias derive from > [{"generated_text": "a common stem cell precursor. This review describes the current status of the molecular and cellular pathogenesis of myeloid neoplasms and acute leukemias, focusing on the role of epigenetic modifications. The review is divided into three sections. The first section discusses the"}]
